TV and Electronics Recycling Private citizens are required to recycle electronics as of Sept. 1, 2010. Until then, many want to recycle to preserve natural resources and keep the environment clean. Wisconsin law requires businesses and institutions to recycle discarded electronics or handle them as a hazardous waste. Televisions and other electronics contain valuable, reusable materials. Plastics, glass, scrap metal (including copper and gold), and many other materials can be extracted from old TVs and used to make new products. Televisions contain harmful materials, including lead, chromium, mercury, and polybrominated flame retardants. If landfilled or incinerated, these chemicals can be released into groundwater, surface water, or the air where they pose a risk to human and environmental health.
